

Clinics of new generation

CLINICS OF NEW GENERATION

There are the new format of medical clinics, which combines western standards with modern medical equipment, high level of service and convenience for the patient, clean rooms, new sets of surgical instrument kits and high quality medical care - is a multidisciplinary outpatient diagnostic center, providing primary health care to adults and children. In Russia, multidisciplinary clinics are available in each city with one million population, along with them there are dozens of private, including those in smaller cities.

Hospitals do not just work with modern medical standards, and implement innovative ideas and the concept of personalized medicine and clean rooms.

High-tech medical diagnostic and surgical procedures are performed under conditions of high sterility that provide clean rooms, equipment for sterilization and disinfection. Introduced telemedicine technology to quickly receive advice from experts from other regions and even countries. For example, WestMedGroup engaged in installation of systems of hospital communication Codaco and construction of clean rooms with modern environment-friendly structural elements Karismedica.
